LCDWIKI

LCDWIKI

# Features

- 320×240 resolution
- Resistive touch control
- Supports any revision of Raspberry Pi (directly-pluggable)
- Compatible with Raspberry Pi A, B, A+, B+, 2B, 3B, 3B+versions
- Drivers provided (works with your own Raspbian/Ubuntu directly)
- Size perfectly fits the Raspberry Pi
- High quality immersion gold surface plating
- Supports Raspbian system, Ubuntu system ,Kali Linux system

# Key Parameters

SKU	MPI3201
LCD Type	TFT
LCD Interface	SPI
Driver IC	ILI9341
Touch Screen Type	Resistive
Touch Screen Controller	XPT2046
Colors	65536
Backlight	LED
Resolution	320*240 (Pixel)
Aspect Ratio	8:5
Active Area	48.6*64.8(mm)
Dimensions	84.91*56.54(mm)
Power Dissipation	0.15A*5V
Rough Weight(Package containing)	54 (g)

# Hardware description

- Dimensional drawing

- Interface

LCDWIKI

<b>PIN NO.</b>	<b>SYMBOL</b>	<b>DESCRIPTION</b>
1, 17	3.3V	Power positive (3.3V power input)
2, 4	5V	Power positive (5V power input)
3, 5, 7, 8, 10, 22	NC	NC
6, 9, 14, 20, 25	GND	Ground
11	TP_IRQ	Touch Panel interrupt, low level while the Touch Panel detects touching
12	KEY1	Key
13	RST	Reset
15	LCD_RS	LCD instruction control, Instruction/Data Register selection
16	KEY2	KEY
18	KEY3	KEY
19	LCD_SI / TP_SI	SPI data input of LCD/Touch Panel
21	TP_SO	SPI data output of Touch Panel
23	LCD_SCK / TP_SCK	SPI clock of LCD/Touch Panel
24	LCD_CS	LCD chip selection, low active
26	TP_CS	Touch Panel chip selection, low active

## How to use with Raspbian

- [Step 1, Install Raspbian official image file](#)

1) Download the latest image from the official download

<https://www.raspberrypi.org/downloads/raspbian/>

2) Install the system according to the official tutorial steps.

- [Step 2, Install the driver for the LCD](#)

1) Connect the **3.2inch RPi Display** with the Raspberry Pi and plug it in

LCDWIKI

2) Log into the command line interface for Raspberry Pi (Initial user name: pi, Password: raspberry) , Get the latest drive from GitHub (the raspberry pie needs to connect to the Internet), Execute the following commands:

```
sudo rm -rf LCD-show
git clone https://github.com/goodtft/LCD-show
chmod -R 755 LCD-show
cd LCD-show/
sudo ./LCD32-show
```

After execution, the system will be restarted. If the display and touch are normal, the installation is successful.

# How to rotate the display direction

This method only applies to the **Raspberry Pi** series of display screens, other display screens do not apply.

- **Method 1**, If the driver is not installed, execute the following command (Raspberry Pi needs to be connected to the Internet):

```
sudo rm -rf LCD-show
git clone https://github.com/goodtft/LCD-show
chmod -R 755 LCD-show
cd LCD-show/
sudo ./XXX-show 90
```

After execution, the driver will be installed. The system will automatically restart, and the display screen will rotate 90 degrees to display and touch normally.

( ' **XXX-show** ' can be changed to the corresponding driver, and ' **90** ' can be changed to 0, 90, 180 and 270, respectively representing rotation angles of 0 degrees, 90 degrees, 180 degrees, 270 degrees)

- **Method 2**, If the driver is already installed, execute the following command:

```
cd LCD-show/
sudo ./rotate.sh 90
```

After execution, the system will automatically restart, and the display screen will rotate 90 degrees to display and touch normally.

( ' **90** ' can be changed to 0, 90, 180 and 270, respectively representing rotation angles of 0 degrees, 90 degrees, 180 degrees, 270 degrees)

If the **rotate.sh** prompt cannot be found, use **Method 1** to install the latest drivers

#### ■ **Driver download**

download:LCD-show.tar.gz (<http://www.lcdwiki.com/res/RaspDriver/LCD-show.tar.gz>)

#### ■ **Images download**

If you have difficulty installing the driver, or if you still can't use the display properly after installing the driver,

Please Try our Configured images for tested.

Just need download and write the image into the TF card. **DO NOT** need any driver installation steps.
